## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of claims 1-10 in the reply filed on 3-1-06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 11-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim.

### ***Specification***

2. The disclosure is objected to because of the following informalities: because there is described related applications with incomplete identifications. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "other" appears to be confusing when used in a Markush group.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu et al in view of Selwyn et al.

Shimizu et al discloses a method of manufacturing granular perpendicular magnetic recording material. There is provided a non-magnetic substrate, and forming a layer track on the surface, the layer stack including granular perpendicular magnetic recording layer (para 0023). A plasma is generated, and the exposed surface of the layer is treated with plasma to form an oxidized surface layer (para 0110). Al-based alloys are disclosed for the non-magnetic substrate (para 0038). A HCP lattice structure is also disclosed (para 0106).

Shimizu et al does not disclose the plasma containing at least one oxygen species derived from a source gas comprised of a compound of oxygen and at least one other non-metallic element.

Selwyn et al discloses oxygen plasma reaction ( ).

Art Unit: 1762

It would have been obvious to one with ordinary skill in the art to include such because of advantages taught by Selwyn et al (para 0010).
